

Cell Culture Products

CELLSTAR® Standard Cell Culture Flasks

For cell culture, Greiner Bio-One offers Standard and Filter Cap Cell Culture Flasks with growth areas of 25 cm², 75 cm² and 175 cm². Suspension culture flasks complete the range in the sizes 50 ml, 250 ml, 550 ml and 650 ml.

with medium, and thus provides additional protection against contamination. The stacking ridge on the top of the flasks makes them easy to stack and ensures that they stand firmly in the incubator. Both sides have a printed or engraved graduation, for easier filling.

All Greiner Bio-One cell culture flasks are made of high-grade polystyrene. For adherent cell growth, the surfaces of our Standard and Filter Cap Cell Culture Flasks are also pre-treated, to improve cell adhesion and proliferation.

The special design of our cell culture flasks makes it possible to efficiently reach the cell lawn with a cell scraper, whilst still providing optimal access with a pipette. The neck of the high profile flask reduces the risk of wetting the inside of the cap

Standard Cell Culture Flasks

- Improved cell adhesion through physical surface treatment
- Cell culture flasks with a standard screw cap (without filter)
- Canted neck
- Graduation on the side
- Sterile and user-friendly packaging
- 25 cm², 75 cm² and 175 cm² growth areas
- High and flat design of the 175 cm² cell culture flask for variability of the medium volume

DNase-free
RNase-free
human DNA-free
non-Pyrogenic

non-
cytotoxic

CELLSTAR® Filter Cap Cell Culture Flasks

Filter Cap Cell Culture Flasks

- Improved cell adhesion through physical surface treatment
- Cell culture flasks with filter screw cap
- Canted neck
- Graduation on the side
- Sterile and user-friendly packaging
- 25 cm², 75 cm² and 175 cm² growth areas
- High and flat design of the 175 cm² cell culture flasks for variability of the medium volume

Capillary pore membranes are used for the filter screw caps of our filter cap cell culture flasks. This is a patented membrane, with a defined pore diameter of 0.2 µm. The inner surface of the membrane material PET is coated with hydrophobic PTFE which prevent a wetting of the inside of the cap with medium. A optimal gas exchange is guaranteed and at the same time the risk of contamination minimised.

- Risk of contamination minimised
- Optimal gas exchange through a high airflow rate of the membrane
- USP Class VI tested
- Additionally standard screw caps (without filter) in each case

CELLSTAR® Suspension Culture Flasks

Standard Suspension Culture Flasks

- Hydrophobic surface, ideal for suspension cultures and hybridoma
- Canted neck
- Suspension culture flasks with standard screw cap (without filter)
- Graduation on the side
- Easily distinguished by their white screw caps
- Sterile and user-friendly packaging
- 50 ml, 250 ml, 550 ml and 650 ml volumes available
